

Welcome 🎉

About

Eighth meeting - welcome back!

Website: <http://railsclub.me>

Facebook group: <http://fb.railsclub.me>

Today's Meeting Procedure

- We are continuing to work on our applications!
- Finish up models
- Bootstrap and CSS!

Come up with something you want
to build. 🧠

Come up with something you want to build.

Can be a blog, portfolio website, Pinterest clone, whatever you want.

The goal is to have this project built using skills you learn here.

Okay. Here we go!

Log into Nitrous

Start up your box

(we'll be coding a few minutes)

Log onto Google Docs

(your school account)

Open up your Rails application plan

Go to: getbootstrap.com

Say hello to Bootstrap!

- It's an awesome CSS framework.

Go to the components page.

Time to install!

Go to rubygems.org and search for
bootstrap-sass

Go to the source code

Try and figure out how we install Bootstrap

Add to your Gemfile

```
gem 'bootstrap-sass'
```

and bundle!

Create a 'custom.css.scss' file
in app/assets/stylesheets

(app/assets/stylehssets/custom.css.scss)

Go to:

app/assets/javascripts/application.js

Add

```
//= require bootstrap
```

before the require for Turbolinks.

Bootstrap has been added!

Go back to the components page.

(on the Bootstrap site)

- This is how you add Bootstrap!

For an example application:

<https://github.com/maclover7/mhw>

It's an LMS (learning management system) I'm working on.

Now:

- Add Bootstrap to your app
- Finish working on generating your models/controllers/etc.

Rails generator commands are your friend:

```
rails generate model [MODEL_NAME]  
rails generate controller [CONTROLLER_NAME]
```

OR:

```
rails generate scaffold [SCAFFOLD_NAME]
```

(scaffolds make views AND a controller AND a model!!!)

Ruby tutorials:

Small Ruby tutorial: tryruby.org

Long Ruby tutorial: rubyinside.com/media/poignant-guide.pdf

- Make sure you join our Facebook group: <http://fb.railsclub.me>
- Next meeting is next week! :)
- Message me on FB or email me if you have any questions
- Feel free to read up about Rails or learn skills in your free time

See you soon! 🙌
